**Course Description:** This course offers an introduction to the behavioural approach to economics. Among the topics covered are behavioural game theory, neuroeconomics, intertemporal decision making, cognitive biases, decision-making heuristics and addiction. The course includes both theoretical and empirical material, but a recurring theme is the importance of experimental findings both in the laboratory and in the field.

**Books:** There is no required textbook for the course. However, you may enjoy reading the following books that cover many of the topics of the course for a non-academic audience:
